Jeroen Kortekaas is a senior molecular virologist of Wageningen Bioveterinary Research (WBVR) and Special Professor of Veterinary Arbovirology, affiliated with the Laboratory of Virology of the Wageningen University. His main responsibility at WBVR is the development of vaccines against notifiable transboundary veterinary and zoonotic viral pathogens, with a main interest in arboviruses. Three vaccines that were developed under his supervision were brought beyond the proof of concept phase in collaboration with pharmaceutical companies. Apart from his involvement in vaccine development and fundamental studies on arboviruses, he is an ad hoc member of several Rift Valley fever expert panels of the World Organisation for Animal Health (Office International des Epizooties, OIE), the United Nations Food and Agriculture Organization (FAO) and Health for Animals (International Federation for Animal Health Europe). In 2017, he co-founded Bunyavax (www.bunyavax.com), a company that develops vaccines using a proprietary platform technology.
